

Executive Summary — The Virginia Plan

Turning an overlooked chiropractor's goodwill into a quarter-million-a-year partnership — and, eventually, a real exit.

The Problem — The Goodwill Trap

Chiropractic practices are valued on EBITDA alone. The 20 years of patient relationships, referrals, and community reputation a doctor builds — their **goodwill** — counts for nothing. A practice doing **\$1.3M in revenue may sell for only ~\$350K**. So the dominant chiropractor in town is trapped: great income while working, almost nothing to sell, and a clinic that dies with the doctor. There is no transfer of equity and no real exit.

"All those clinics die with the doctor — there's no transfer of equity." · "Chiropractors will die on the table because they don't know how else to provide their same lifestyle." — Dr. Wagner

The Model — A Two-Phase Partnership

Phase 1 — Lease (income now)

- PROMEDVA leases space **inside the chiropractor's existing clinic** for a medical office.
- The chiropractor collects a **\$10,000/month base lease** plus **quarterly performance bonuses (~\$25K, on hitting the metrics)** — building toward ~\$200,000/year — plus a **cash-pay medical-services line**.
- A PROMEDVA medical team runs advanced diagnostics and treatments the DC can't bill today. The chiropractor keeps adjusting patients exactly as they do now and **does not have to learn the system**.
- Practice growth: **partner practices average ~\$250,000/year in new growth** (illustrative, not a guarantee) — "doing exactly what you do today."

Compliance by design: the cash-pay services are **billed by PROMEDVA's own medical team** — deliberately structured to stay clear of insurance/Medicare fee-splitting and anti-kickback rules. Dr. Wagner engages his own Virginia healthcare counsel to finalize the structure.

Phase 2 — Acquire (the exit)

- After the partnership **proves the fit** (a defined window with clear KPIs), PROMEDVA acquires the practice.
- Terms: **50% cash down + 50% seller financing**, plus **4% profit sharing**.
- Valued at a **platform-level multiple** — finally monetizing the goodwill a standalone sale ignored.

The Ladder at a Glance

Step	What happens	Chiropractor gets
1 · Free valuation	"Value My Clinic" shows true worth today vs. in 2 years	Clarity + the hook
2 · Lease partnership	Medical office leased in their space; medical team runs diagnostics	\$10K/mo + quarterly bonuses · ~\$200K/yr to the practice (up to ~\$250K)
3 · Prove fit	KPIs met over the partnership window; both sides confirm fit	Higher income + better patient care
4 · Acquire	50% cash / 50% seller note + 4% profit share, platform multiple	A real exit — goodwill finally paid

Why Virginia First

Launch exclusively in Virginia to prove the model before scaling. Partner with the **single dominant chiropractor in each major Virginia city** — the college / sports / personal-injury DC everyone already refers to. (See companion docs: *Target Chiropractor ICP* and *Virginia Rollout Plan + KPIs*.)

The Initial Engagement

The first step is a **lean four-city Virginia test** — a cluster of smaller college towns (Waynesboro, Staunton, Harrisonburg, Lynchburg), plus Richmond as a metro candidate — fully managed by **Kingdom Broker LLC (Eric Skeldon)**: build and localize the PROMEDVA funnel, run a concentrated ad test plus owned-list outreach, and hire the team to operate it — targeting **one signed partner per city** as the case study to scale. Dr. Wagner funds the test (cancellable anytime with 14 days' notice); Kingdom Broker manages it and earns a success fee on partners closed. See *Virginia Test — Engagement & Budget*.

PROMEDVA · Confidential. Income and valuation figures are illustrative, not guarantees. Phase 1 is a commercial lease of space for cash-pay medical services delivered by PROMEDVA's own team — not a referral arrangement and no fee-splitting on

insurance/Medicare. Any partnership or acquisition is subject to definitive documentation and applicable Virginia law (including corporate-practice-of-medicine requirements). Not an offer to buy or sell a practice.
